

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in this application.

Listing of claims:

1. (original) A method comprising:

simultaneously displaying a first content stream and a second content stream within a spherical display;

receiving instructions to change a partition between a first area for displaying the first content stream and a second area for displaying the second content stream;

and

dynamically partitioning the first area and the second area based on the instructions, wherein the first area and the second area are within the spherical display.
2. (original) The method according to claim 1 further comprising storing the first content stream and the second content stream in a storage device.
3. (original) The method according to claim 1 further comprising capturing the first content stream with a content capturing device.
4. (original) The method according to claim 3 wherein the content capturing device is a video camera.
5. (original) The method according to claim 3 wherein the content capturing device is a digital camera.
6. (original) The method according to claim 1 further comprising simultaneously capturing the first content stream and the second content stream.

7. (original) The method according to claim 1 wherein the instructions are based on rotating a playback ring to adjust the partition.

8. (original) The method according to claim 1 wherein the spherical display includes a flat display surface and a spherical display surface.

9. (original) The method according to claim 1 wherein the first content stream is video footage.

10. (original) The method according to claim 1 wherein the first content stream is a digital image.

11. (original) The method according to claim 1 wherein the first content stream is audio data.

12. (original) A system comprising:

means for simultaneously displaying a first content stream and a second content stream within a spherical display;

means for receiving instructions to change a partition between a first area for displaying the first content stream and a second area for displaying the second content stream; and

means for dynamically partitioning the first area and the second area based on the instructions, wherein the first area and the second area are within the spherical display.

13. (original) A method comprising:

receiving a first content stream and a second content stream;

projecting the first content stream onto a first area;

projecting the second content stream onto a second area; and

dynamically intersecting the first content stream onto the second content stream wherein a portion of the first area and the second area are shared.

14. (original) The method according to claim 13 further comprising simultaneously capturing the first content stream and the second content stream.

15. (original) The method according to claim 13 further comprising transmitting the first content stream and the second content stream in real time.

16. (original) The method according to claim 13 wherein the first content stream is video footage.

17. (original) The method according to claim 13 wherein the first content stream is captured by a video camera.

18. (original) A method comprising:

simultaneously capturing a first content stream and a second content stream;
simultaneously displaying the first content stream and the second content stream within a spherical display; and
dynamically partitioning a first area for displaying the first content stream and a second area for displaying the second content stream,
wherein the first area and the second area are within the spherical display.

Claims 19 - 23 (cancelled)

24. (original) A computer-readable medium having computer executable instructions for performing a method comprising:

receiving a first content stream and a second content stream;
projecting the first content stream onto a first area;
projecting the second content stream onto a second area; and
dynamically intersecting the first content stream onto the second content stream wherein a portion of the first area and the second area are shared.
